### APPLIED ECONOMICS

#### I. SCOPE NOTE

*Applied economics applies the conclusions drawn from economic theories and empirical studies to real-world situations with the desired aim of informing economic decisions and predicting possible outcomes. The purpose of applied [economics](#) is to improve the quality of practice in business, public policy, and daily life by thinking rigorously about costs and benefits, incentives, and human behavior. Applied economics can involve the use of case studies and [econometrics](#), which is the application of real-world data to statistical models and comparing the results against the theories being tested.*
